

USE OF A COMPOUND WHICH MODIFIES THE SECRETION OF  
INTERLEUKIN 5, INTERLEUKIN 6 AND/OR INTERLEUKIN 10 FOR  
THE PREPARATION OF A PHARMACEUTICAL COMPOSITION FOR  
TREATING ROSACEA

The invention relates to the use of a compound which modifies, and advantageously inhibits, the secretion of at least one interleukin chosen from the group comprising IL-5, IL-6 and IL-10, for the preparation of a pharmaceutical composition for treating rosacea.
